

Estimating Your Cost of Production

HAVE you ever tried to estimate your cost of production for enterprises on your farm/ranch? It can be a daunting challenge. The *Enterprise Risk Analyzer* (ERA) tool can help evaluate farm/ranch enterprise performance, beginning with just an IRS Schedule F.

ERA analysis includes whole farm/ranch net return, enterprise net return, break-even prices, and breakeven yields. ERA also provides risk estimates based on user projections for commodity prices and yields. Providing probability estimates for earning a given level of net income, a break-even price, or a given break-even yield.

The *Enterprise Risk Analyzer* tool is one of over 30 individual risk analysis tools developed by RightRisk and available free of charge at: RightRisk.org/analytics.
