Applied Risk Analytics Evaluating Fertilizer Application Decisions

RANCHERS

Adam and Jill Tomzak are considering their fertilizer needs for the coming year, specifically for their irrigated grass hay crop. They know they need to apply at least some fertilizer for maintenance. The Tomzaks are concerned, however, about the high prices for nitrogen. Their analysis takes a closer look at what the optimum rate of fertilizer might be and the risk management implications of their decision . . .

Learn more via the APPLIED RISK ANALYTICS series, covering the application of RightRisk Analytics risk analysis tools, available for download at: RightRisk.org/Analytics.
