## Applied Risk Analytics Every Drop Counts: Allocating Scarce Irrigation Water

**Ted Baker** is a Wyoming crop and hay producer who faces a common challenge among irrigated farmers in the region: a limited water supply for irrigation. Midway through the growing season, Ted had been following his usual irrigation schedule when a water-limiting event occurred. He believes he has three realistic options: focus irrigation on the alfalfa, focus on the corn, or split the water between both crops; the latter would likely lead to inadequate irrigation for each . . .
