Managing Limited Irrigation Water: Identifying the Best Available Option

Midway through the previous growing season, a water-limiting event disrupted the usual irrigation cycle for many farmers in the area. Ted believed he had only three realistic options: focus irrigation on the alfalfa, focus on the corn, or split the water between both crops.

Early in the current crop season, it has become clear that the water shortage may extend for one or two additional years. Here, Ted's available choices will be carefully evaluated . . .
